

## Weed Out Waste (W.O.W.)

Reduce errors and costs **FAST**

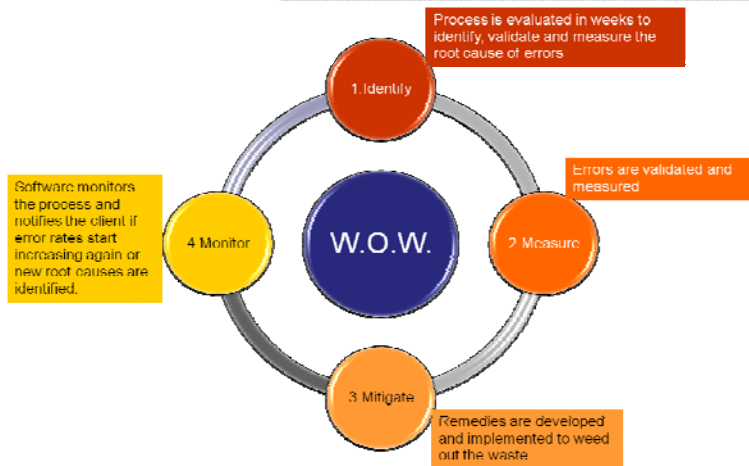

—in manual transaction processing environments

In today's economy companies are facing huge challenges to cut costs—quickly. Manual business processes are invariably error prone and have significant cost impact downstream. Many of those errors are difficult or take long for humans to identify. These hidden costs are akin to hidden fat that you can't see and cannot target. Would you like to **Weed-Out-Waste (WOW)** quickly?

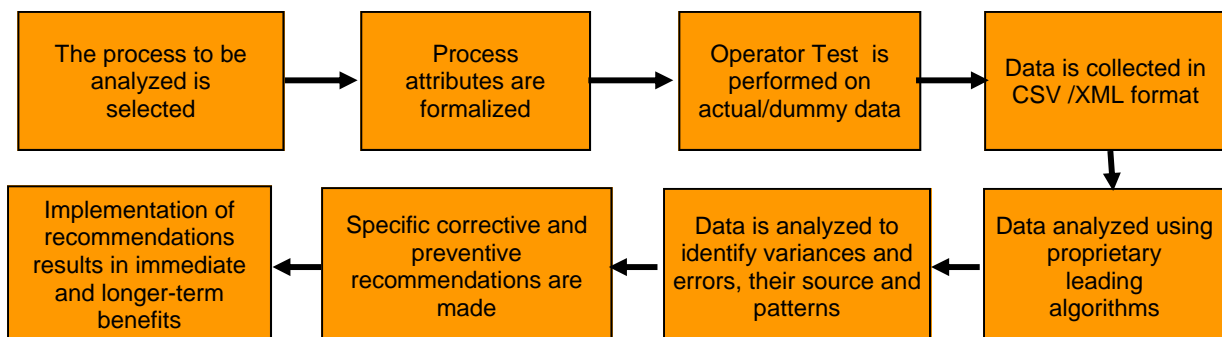

Our market-leading solution can help you to quickly identify waste - errors and error patterns that are hard for humans to find quickly or easily—and eliminate them. Once the 'waste' in your processes are eliminated, your savings go on and on and on.

Argea and BeyondCore together can help you reduce costs and errors by identifying and eliminating 'hidden fat', not the muscle. We help you identify errors contextually (who is making what error in what situation), identify root causes and clean up processes—faster than any traditional quality improvement tool or methodology.

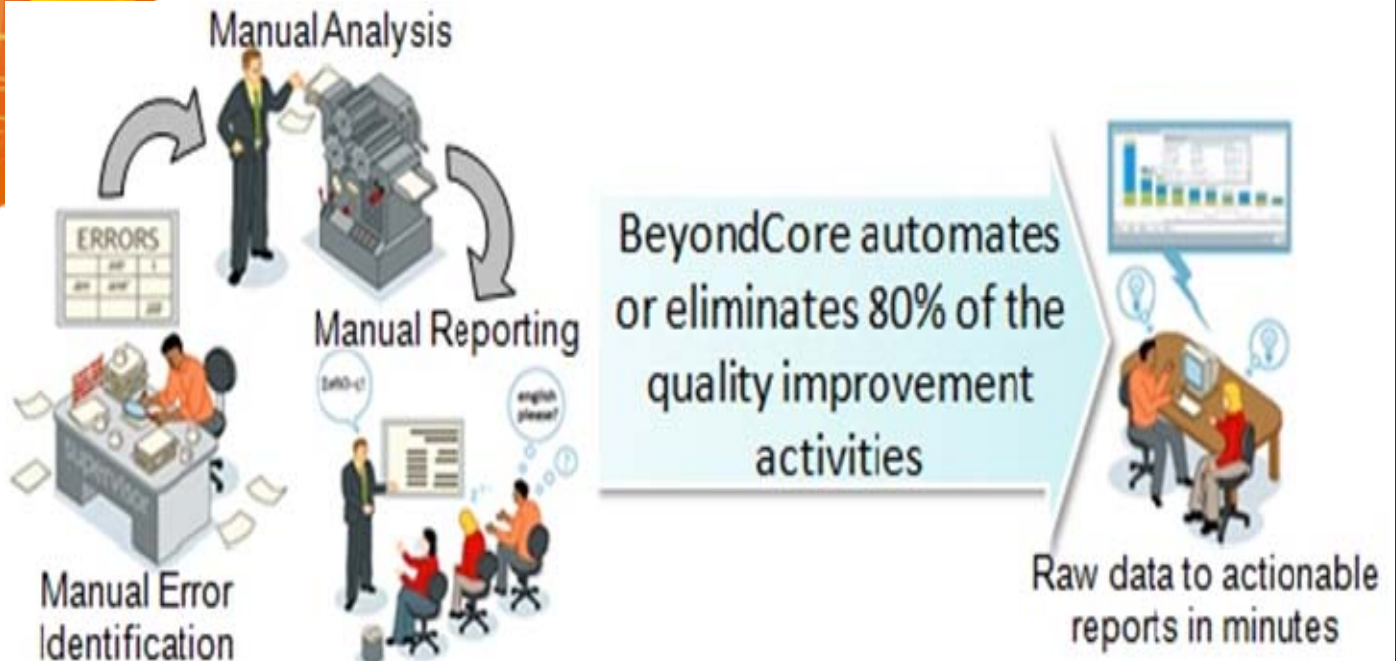

### The Solution...

The whole process takes weeks not months as compared to traditional process improvement initiatives. The data collected is analyzed using the BeyondCore software having market leading algorithms built in. Variances & error patterns are identified within days and interpreted in graphically representation. Argea's experience practitioners will make specific recommendations—corrective & preventive to help improve the quality of the business processes.

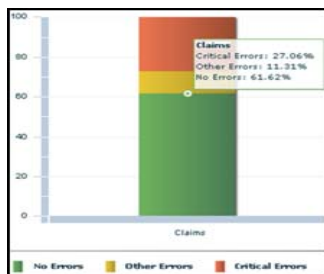

## How is this different from other operations improvement solutions?

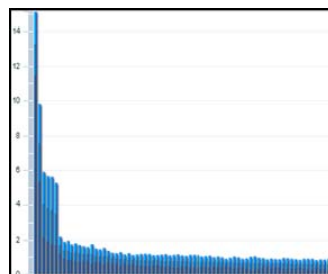

**Only solution that delivered 30% quality improvement in one week at a Fortune 500 firm:**

- Produces detailed analysis in just two weeks
- Market leading algorithms automatically detects errors with 95% accuracy as compared to Manual Error detection which is only 25% to 80% accurate.
- Automated analysis and reporting retains error details simplifies root-cause detection.

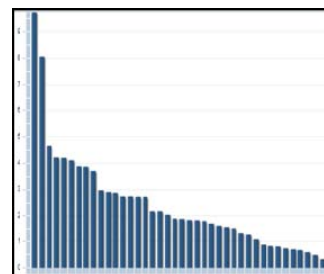

## Error Pattern Identification

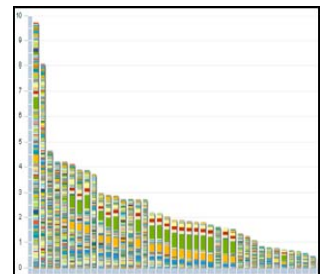

**Percent of transactions with errors:** how many of your transactions are re-worked at high cost?

**Variability of errors across operators:** 20% of operators can count for 80% of errors. Find out which 20% are most error prone.

**Variability of errors across fields:** Are some of your fields counting for the majority of errors? Find out which ones.

**Operator-Field Error Prints:** reveal error root causes that can be rapidly eliminated to deliver quality improvements in weeks not months.

Exceptional Practitioners. Exceptional Results.<sup>SM</sup>

### Advantages of the Solution

Traditional Quality Improvement Initiatives	Argea-BeyondCore Solution
• Manual	• Automatic
• Humans can only identify about 60% of errors	• Automatic system identifies up to 95% of errors
• Error pattern reports lack detailed error context	• Dashboard provides in-context error details
• Initiatives require months to produce results	• Raw data to finished reports in minutes; quantifiable cost reduction results in days
• Expensive experts spend 80% of their time on low value-added activities such as data collection and charting	• Automated data collection and graph generation; experts can focus on value-added pattern interpretation
• Quality improvement methodologies require months of training and expensive experts	• 30 minutes of training for supervisors and no impact on operations
• Payback time for the quality improvement initiatives are longer	• Argea-BeyondCore solution pays back for itself in less than a quarter
• Many experienced resources needed for the quality improvement projects	• Minimum resources required for the project. Most of the work is performed offsite.

### About Argea

Argea’s team of exceptional practitioners help businesses become more globally competitive by optimizing business processes and intelligently integrating the right mix of global resources and technology to drive exceptional business performance. We help clients improve operations through advice, integration, and hands-on management.

Our team of highly accomplished senior executives and Six Sigma black-belts has deep experience in the specialized practice of enterprise transformation, operations, business process excellence, and change management.

Argea’s Exceptional Practitioners have worked in Global 1000 enterprises in management , as end-users and as service providers across different industries and business functions; and, at client sites in 16 countries in just the last three years.
